Subject: Re: oil tank composite

Thanks Alexas - can we talk about this tomorrow?

Within the EI data, Bill Barrett had 5 designated production areas, each of the production areas had gas analysis data associated with it.

Production area 1: only had flash gas analysis data

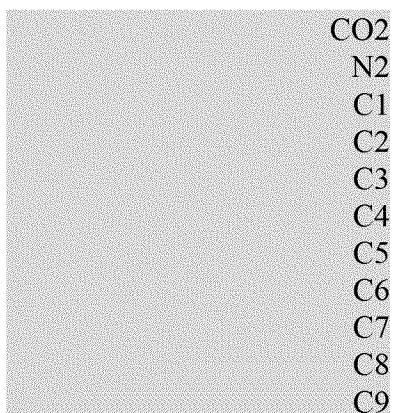

Production area 2: had flash gas and standing working breathing gas analysis data

Production area 3: only had flash gas analysis data

Production area 4: had flash gas and standing working breathing gas analysis data

Production area 5: only had standing working breathing analysis data

The constituents are:

CO2
N2
C1
C2
C3
C4
C5
C6
C7
C8
C9

C10
Benzene
Toluene
Ethylbenzene
Xylene
N-Hexane

The numbers are in mole fractions.

Ex. 5 - Deliberative Process

Thanks

Alexas

Alexas - Did Bill Barrett provide a speciated tank emission profile as part of the UB

Ex. 5 - Deliberative Process

I'm cc'ing **Aaron** on this email too because he is part of the data analysis team.

All

The corrected Uinta Basin oil tank profiles have a very high benzene due to the profile from "Oil Field - Oil Tank Battery Vent Gas - Bill Barrett Corporation" which is 10 times more benzene than the other 2 operators (see attachment, rows 40, 41 and 42)

I've not seen that high benzene from other oil tank profiles (East Texas or Uinta WRAP). Did you have any newer data that can shed light on whether the composite is reliable to use in our modeling or should we use the WRAP for this category (oil tanks)

Composite Profile 95419 Oil Tanks ERRONEOUS versus CORRECTED
